Open to relocation (visa sponsorship required) or remote

Summary

Ruby on Rails developer with **6+ years** building and scaling production applications on **PostgreSQL**, **Redis** and **Sidekiq**, with hands-on **React** and **Elixir**. Focuses on performance, reliability and security: cut a hot query on a 56M-row table from 257 ms to 0.3 ms, halved CI time and remediated a high-severity SSRF vulnerability. Writes well-tested, maintainable Ruby and improves team processes along the way.

Skills

Ruby & Rails: Ruby, Ruby on Rails, Sinatra, Sidekiq, ActionPolicy, dry-rb, Ransack, RSpec, FactoryBot, RuboCop, bundler-audit
Data & messaging: PostgreSQL, SQL (Arel, EXPLAIN ANALYZE, indexing), Redis, RabbitMQ
Also: Elixir, Phoenix, React, Redux Toolkit, JavaScript, HTML/CSS, Vite, Webpack, Jest
DevOps & tools: Docker, Docker Compose, DroneCI, parallel_tests, Git, Postmark
AI: LLM features with the OpenAI API, AI-assisted development (Claude Code)

Experience

Full-Stack Developer - PushSMS · product: ChatPush, messaging for CRMs — 07/2023 – present

· **Cut a hot query from 257 ms to 0.3 ms** on a **56M+ row PostgreSQL table** by diagnosing it with **EXPLAIN ANALYZE** and adding the right index.
· **Optimised slow SQL queries** across the application using **Arel** and query refactoring.
· **Halved CI time (2× faster)** in **DroneCI** with **parallel_tests**, shortening the feedback loop.
· **Remediated a high-severity SSRF vulnerability** in **HTTParty** (CVE-2025-68696) that could leak API keys, detected with **bundler-audit**.
· **Found and fixed a business-critical flaw in SMS rate limiting**, stopping excessive SMS sends and the operational costs they caused.
· **Introduced ActionPolicy authorisation**, centralising permission rules and tightening access control.
· **Built an AI-powered assistant** on the **OpenAI API**, adding intelligent in-product interactions for users.
· **Automated recurring invoice processing**, removing a manual, error-prone task from the team.

Professional Development - Self-directed — 10/2022 – 06/2023

· Dedicated study and personal projects to deepen skills across the modern web stack.

Ruby on Rails Developer - Basistech (formerly TIONIX) — 01/2021 – 10/2022

· **Integrated the product with virtualisation platforms**, automating management of virtual resources.
· **Improved a third-party platform integration** with pagination and refactoring, making it faster and more reliable.
· **Kept credentials out of logs** by overriding logging in **Sidekiq**, Rails and **HTTParty**.

Ruby Developer - At Consulting — 04/2020 – 12/2020

· **Improved performance** by moving signal processing to asynchronous jobs.
· **Created the project's onboarding documentation and process**, shortening ramp-up for new developers.
· **Made virtual machine backups more reliable** and easier to recover from.

Ruby on Rails Intern - At Consulting — 01/2020 – 03/2020

· Completed an intensive **Ruby on Rails** internship working on production systems.

Education

Specialist Degree (Master's equivalent) - MSUPE — 2010 – 2017

· Moved into software development in 2020 through a Ruby on Rails internship.
