Summary

Full-stack engineer with **6+ years** building and scaling production web applications with **Ruby on Rails**, **React** and **Elixir**, currently on a messaging platform handling ~**10M messages a month**. Delivers measurable performance and reliability wins (a 257 ms → 0.3 ms query on a 56M-row table, CI twice as fast), **LLM (OpenAI API)** features and security hardening, owning work end to end.

Skills

Backend: Ruby, Ruby on Rails, Elixir, Phoenix, PostgreSQL, Redis, Sidekiq, RabbitMQ, REST APIs, ActionPolicy
Frontend: React, Redux Toolkit, JavaScript, HTML, CSS, Vite
Testing & DevOps: RSpec, Jest, RuboCop, bundler-audit, Docker, Docker Compose, DroneCI, Git
AI: LLM features with the OpenAI API, prompt and model management, AI-assisted development (Claude Code)

Experience

Full-Stack Engineer - PushSMS · ChatPush messaging platform, ~10M messages/month — 07/2023 – present

· **Cut a hot query from 257 ms to 0.3 ms** on a **56M+ row PostgreSQL table** by diagnosing it with **EXPLAIN ANALYZE** and adding the right index.

· **Built an AI assistant** on the **OpenAI API** that answers from product data and powers other AI features, e.g. smart notifications that evaluate users' replies; added prompt and model management to the back office.

· **Rebuilt the user account dashboard** as a cached page backed by **Redis** and **Sidekiq** background jobs.

· **Designed and optimised an Elixir backend service** serving ~**25,000 users**.

· **Built messaging and CRM integrations**: **WhatsApp Business API**, **Telegram (TDLib)**, YCLIENTS, Avito.

· **Halved CI time (2× faster)** in **DroneCI** with **parallel_tests**, shortening the feedback loop.

· **Remediated a high-severity SSRF vulnerability** in **HTTParty** (CVE-2025-68696) that could leak API keys, detected with **bundler-audit**.

· **Found and fixed a business-critical flaw in SMS rate limiting**, stopping excessive SMS sends and the operational costs they caused.

Professional Development - Self-directed — 10/2022 – 06/2023

· Study and open source: **hexlet-cv** (Ruby on Rails, 3 merged PRs), **rusrails** (Rails Guides in Russian).

Ruby on Rails Developer - Basistech (formerly TIONIX) — 01/2021 – 10/2022

· **Integrated the product with virtualisation platforms**, automating management of virtual resources.

· **Improved a third-party platform integration** with pagination and refactoring, making it faster and more reliable.

· **Kept credentials out of logs** by overriding logging in **Sidekiq**, Rails and **HTTParty**.

Ruby Developer (intern until 03/2020) - At Consulting — 01/2020 – 12/2020

· **Improved performance** by moving signal processing to asynchronous jobs.

· **Created the project's onboarding documentation and process**, shortening ramp-up for new developers.

Education

Joint Programme (in progress) - SPbPU → WelTec (Wellington, NZ) — 2026 – 2028

· Team project: **Megatron-mk1**, an LLM-based support-ticket router (Qwen3 via Ollama, Django).

Specialist Degree (Master's equivalent) - MSUPE — 2010 – 2017

Certifications: Meta Front-End Developer Certificate (2026) · AWS Cloud Technical Essentials (2026) · LeetCode 500-day streak
